

PROJECT REPORT

PocketSmart AI: Your Smart Budget & Recommendation Assistant

Submitted by: S. Poovarasan

Course: BCA – 2nd Year

A Project Report on Smart Budget Management and AI-Based Recommendations

2. Abstract

PocketSmart AI is a smart budgeting application designed to help users manage their income and daily expenses. The system records financial transactions, categorizes expenses, analyzes spending patterns, and provides personalized budget recommendations. By using AI-based analysis, PocketSmart AI helps users understand where their money is being spent and supports better budgeting and saving decisions.

3. Introduction

Managing personal finances can be difficult when expenses are not properly tracked. People may spend more than planned and may not know which categories consume most of their income.

PocketSmart AI provides a simple solution by combining expense tracking, budget management, data analysis, and AI-based recommendations in one system.

4. Problem Statement

- Difficult to track daily expenses manually.
- Unplanned spending can affect monthly budgets.
- Users may not clearly understand their spending patterns.
- Manual budget preparation takes time.
- Users may not know where they can reduce unnecessary expenses.

5. Objectives

- To record income and expenses.
- To categorize expenses automatically or manually.
- To create and monitor monthly budgets.
- To analyze spending patterns.
- To provide personalized recommendations.
- To help users develop better saving habits.

6. Existing System

In the traditional system, users commonly maintain their expenses using notebooks, spreadsheets, or basic expense applications.

Limitations

- Manual data entry and analysis.
- Limited personalized recommendations.
- Difficult to identify long-term spending patterns.
- Less intelligent budget planning.

7. Proposed System

PocketSmart AI provides an integrated platform for managing personal finances. Users enter their income and expenses, and the system processes the information to generate useful insights.

Main Functions

- Expense tracking
- Budget management
- Expense categorization
- AI-based analysis
- Smart recommendations
- Reports and charts
- Budget alerts

8. Project Workflow

User Input → Data Storage → Expense Categorization → AI Analysis → Budget Comparison → Smart Recommendations → Dashboard & Alerts

9. Key Modules

9.1 User Module

Allows users to enter and manage their financial information.

9.2 Expense Management Module

Records daily expenses and organizes them into categories such as food, travel, shopping, education, and bills.

9.3 Budget Module

Allows users to set monthly spending limits.

9.4 AI Analysis Module

Analyzes spending patterns and identifies changes or unusual spending.

9.5 Recommendation Module

Provides personalized suggestions based on the user's spending behavior.

9.6 Dashboard Module

Displays expenses, budget status, charts, and financial insights.

10. System Architecture

User Interface → PocketSmart AI Application → Database / Transaction Data → Data Processing → AI Analysis Engine → Recommendation System → Dashboard & Reports

11. Technologies Used

Frontend: HTML, CSS, JavaScript

Backend: Python

Database: MySQL / SQLite

AI/Data Analysis: Python, Pandas

Visualization: Charts and dashboards

Development Environment: VS Code / similar IDE

12. Advantages

- Easy expense tracking.
- Saves time.
- Provides personalized insights.
- Helps monitor monthly budgets.
- Makes spending patterns easier to understand.
- Supports better financial planning.

13. Future Scope

- Voice-based expense entry.
- Advanced AI financial insights.
- Saving-goal management.
- Predictive monthly expense analysis.
- Optional integration with supported financial accounts.
- Mobile application version.
- Personalized financial notifications.

14. Conclusion

PocketSmart AI is a smart personal budgeting solution that combines expense tracking, budget management, data analysis, and AI-based recommendations. It helps users understand their spending patterns and manage their budgets more effectively. The project demonstrates how AI and data analysis can be applied to everyday financial management.
